PROGRESSION MAP
Addition

This must be viewed alongside the subtraction map so that connections can be made.

YR	Y1	Y2	Y3	Y4	Y5	Y6
Understanding the operation and related vocabulary						
understand addition as: - combining two quantities - increasing one quantity	understand addition as: - combining two or more quantities - increasing one quantity	continue to understand addition as: - combining two or more quantities - increasing one quantity	continue to develop understanding of addition			
		show that addition of two numbers can be done in any order (the commutative law)	understand the principles of the commutative and associative law	continue to understand the principles of the commutative and associative laws		use their knowledge of the order of operations
		recognise the inverse relationship between addition and subtraction	understand the inverse relationship between addition and subtraction	continue to understand the inverse relationship between addition and subtraction		
record using marks that they can interpret and explain	read, write and interpret mathematical statements involving addition (+) and equals (=) signs solve missing number problems	solve missing number problems.	solve missing number problems	continue to solve missing number problems	continue to solve missing number problems begin to use brackets	continue to solve missing number problems explore the order of operations using brackets
begin to use the vocabulary involved in adding <i>add, altogether, total, , ..more than ..</i>	understand the vocabulary related to addition <i>plus, the sum of</i>	understand the vocabulary related to addition	understand, read and spell vocabulary related to addition correctly <i>increase</i>	understand, read and spell vocabulary related to addition correctly	read, spell and pronounce mathematical vocabulary related to multiplication correctly	read, spell and pronounce mathematical vocabulary related to multiplication correctly
Recalling number facts						
recall addition facts to 5	recall and use addition facts to 10 fluently	recall and use addition facts to 20 fluently, and derive and use related facts up to 100	continue to recall and use addition facts to 20 fluently, and derive and use related facts beyond 100 80+50	continue to use knowledge of addition facts and place value to derive related facts 800+500	continue to use knowledge of addition facts and place value to derive related facts with numbers to one decimal place 1.2 + 0.7	continue to use knowledge of addition facts and place value to derive related facts with numbers to two decimal places

know number pairs with a total of 10 $6 + ?$	know number pairs with a total of 20	know complements to the next multiple of 10 $52 + ? = 60$ know pairs of multiples of 10 with a total of 100	know pairs of two-digit numbers with a total of 100	know complements to the next multiple of 100 $568 + ? = 600$	know complements to 1 $0.83 + 0.17 = 1$ recall pairs of three-digit numbers with a total of 1000	know complements to the next whole number $7.632 + ? = 8$
Mental methods and mental methods with jottings						
find the total number of items in two groups by counting all of them add two single-digit numbers and count on to find the answer.	add one-digit and two-digit numbers to 20, including zero represent and use number bonds within 20	add numbers using concrete objects, pictorial representations, and mentally, including: * a two-digit number and ones * a two-digit number and tens * two two-digit numbers * adding three one-digit numbers	add numbers mentally, including: * a three-digit number and ones * a three-digit number and tens * a three-digit number and hundreds	continue to practise mental methods of addition with increasingly large numbers	add numbers mentally with increasingly large numbers add tenths, and one-digit whole numbers and tenths	perform mental calculations, including with mixed operations, large numbers and decimals add positive and negative integers (in contexts such as temperature)
Formal written layout						
		add numbers with up to two digits, using number lines and partitioning	add numbers with up to three digits, using formal written methods of columnar addition	add numbers with up to 4 digits using the formal written method of columnar addition where appropriate	add whole numbers with more than 4 digits, including using formal written methods	practise addition for larger numbers, using formal written methods
				add decimals to 2 decimal places (in the context of money or measures)	add decimals, including a mix of whole numbers and decimals and decimals with different numbers of decimal places	continue to practice addition calculations with decimals (up to 3 decimal places)
Estimating and checking						
		check calculations by adding in a different order	estimate the answer to a calculation use inverse operations to check answers use equivalent calculations to check answers	estimate the answer to a calculation use inverse operations to check answers use equivalent calculations to check answers	use rounding to check answers to calculations and determine, in the context of a problem, levels of accuracy continue to use appropriate strategies to check answers	use estimation to check answers to calculations and determine, in the context of a problem, levels of accuracy. continue to use appropriate strategies to check answers

ADDITION: Y1		
Understanding the operation and related vocabulary.	Mental Calculations	Written Calculations
<p>Understanding the operation</p> <p>Understand addition as:</p> <ul style="list-style-type: none"> - Combining two or more quantities. - Increasing one quantity.  <p>Read, write and interpret mathematical statements involving addition (+) and equals (=) sign.</p> <p>$14+5=19$ $17=9+8$</p> <p>Solve missing number problems</p> <p>$11+\square=18$ $\square=13+2$ $13=\square+\square$</p> <p>Understand addition and subtraction as related operations. E.g. $7+3=10$ is related to $10-3=7$</p>  <p>When introduced to the equals sign, children should see it as signifying equality. They should become used to seeing it in different positions.</p>	<p>Number facts</p> <p>Recall and use addition facts to 10 fluently the total of 6 and 3 6 plus 2 4 more than 5 Know number pairs with a total of 20 $16+\square=20$ $20=3+\square$</p> <p>Mental methods and jottings</p> <p>Add one-digit and two-digit numbers to 20, including zero using concrete objects, pictorial representation and mentally.</p> <p>Represent and use number bonds within 20, experiencing the = sign in different positions.</p> <p>Counting on (sequencing)</p> <p>$12+3$ (by counting on in ones; 13, 14, 15) With Jottings: <i>Progress to crossing the tens boundary</i> $18+5$ (by partitioning 5 to bridge the tens boundary; + 2, + 3)</p> <p>Partitioning</p> <p>$5+7$ (by partitioning 7 in to 5 and 2) $5+5+2$</p> <p>Use bundles of straws and Dienes to model partitioning teen numbers into tens and ones and develop their understanding of place value.</p> <p>Children have opportunities to explore partitioning numbers in different ways. e.g. $7=6+1$, $7=5+2$, $7=4+3$</p>	<p>No formal written layout. Children record their maths using pictorial representations, number lines and mathematical statements.</p> <p>Counting and Combining sets of Objects $5+7=12$</p>  <p>Add one-digit and two-digit numbers to 20, including zero</p> <p>$7+4$</p>  <p>OR</p> 

Vocabulary

Understand the vocabulary related to addition:

Addition, add (+), forwards, put together, more than, total, altogether, distance between, difference between, equals = same as, most, pattern, odd, even, digit, counting on, plus, the sum of

Generalisations

- True or false? Addition makes numbers bigger.
- True or false? You can add numbers in any order and still get the same answer.

Some Key Questions

How many altogether? How many more to make...? I add ...more. What is the total? How many more is... than...? How much more is...? One more, two more, ten more...

What can you see here?

Is this true or false?

What is the same? What is different?

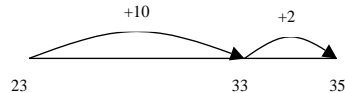

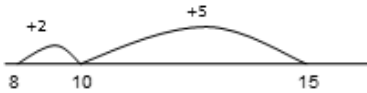

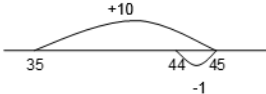

Children should experience regular counting on and back from different numbers in 1s and in multiples of 2, 5 and 10.

Using known facts and place value

$$15 + 4$$

$$5 + 4 = 9 \text{ so } 15 + 4 = 19$$

ADDITION: Y2		
Understanding the operation and related vocabulary.	Mental Calculations	Written Calculations
<p>Understanding the operation</p> <p>Continue to understand addition as:</p> <ul style="list-style-type: none"> - Combining two or more quantities. - Increasing one quantity. <p>Show that addition of two numbers can be done in any order (commutative law)</p> <p>Recognise that $5 + 27$ is equal to $27 + 5$</p> <p>Continue to recognise the inverse relationship between addition and subtraction using numbers up to 20.</p> <p>Write the related number sentences</p> <p>$15+2=17$ $2+15=17$ $17=15+2$ $17=2+15$ $17-2=15$ $17-15=2$ $2=17-15$ $15=17-2$</p> <p>Solve missing number problems</p> <p>$17+\square=27$ $\square=21+4$ $10=\square+\square$</p> <p>Vocabulary</p> <p>Understand the vocabulary related to addition</p> <p>+, add, addition, more, plus, make, sum, total, altogether, how many more to make...? how many more is... than...? how much more is...? =, equals, sign, is the same as, Tens, ones, partition</p> <p>Near multiple of 10, tens boundary, More than, one more, two more... ten more... one hundred more</p> <p>Generalisation</p> <ul style="list-style-type: none"> • Noticing what happens when you count in tens (the digits in the ones column stay the same) • Odd + odd = even; odd + even = odd; etc • show that addition of two numbers can be done in any order (commutative) and subtraction of one number from another cannot 	<p>Number facts</p> <p>Recall and use number facts to 20 fluently and derive and use related facts up to 100.</p> <p>7 add 8 4 more than 9 50 plus 30 the sum of 40 and 50</p> <p>Know complements to the next multiple of 10.</p> <p>$52+\square=60$ $76+\square=80$</p> <p>Know pairs of multiples of 10 with a total of 100.</p> <p>$60+\square=100$ $100=70+\square$</p> <p>Mental methods and jottings</p> <p>Add numbers using concrete objects, pictorial representations, and mentally, including:</p> <ul style="list-style-type: none"> * a two-digit number and ones * a two-digit number and tens * two two-digit numbers * adding three one-digit numbers <p>Counting on</p> <p>$37 + 20$ (by counting on in tens; 47, 57)</p> <p>With Jottings</p> <p>Begin by not crossing the tens boundary</p> <p>$42 + 23$ (by partitioning the second number and counting on; + 20, + 3)</p> <p>Progress to crossing the tens boundary</p> <p>$47 + 15$ (by partitioning the second number and counting on; + 10, +3, +2)</p> <p>Partitioning</p> <p>$23 + 12$ ($20 + 10 = 30$, $3 + 2 = 5$ then $30 + 5 = 35$)</p> <p>With Jottings</p> <p>Begin by not crossing the tens boundary</p> <p>$42 + 23$ ($40 + 20 = 60$; $3 + 2 = 5$ then $60 + 5$)</p>	<p>Continue to use number lines to develop understanding of:</p> <p>Counting on in tens and ones</p> <p>$23 + 12 = 23 + 10 + 2$ $= 33 + 2$ $= 35$</p>  <p>Partitioning and bridging through 10.</p> <p>The steps in addition often bridge through a multiple of 10</p> <p>e.g. Children should be able to partition the 7 to relate adding the 2 and then the 5.</p> <p>$8 + 7 = 15$</p>  <p>Adding 9 or 11 by adding 10 and adjusting by 1</p> <p>e.g. Add 9 by adding 10 and adjusting by 1</p> <p>$35 + 9 = 44$</p> 

- Recognise and use the inverse relationship between addition and subtraction and use this to check calculations and missing number problems. This understanding could be supported by images such as this.

Some Key Questions

How many altogether? How many more to make...? How many more is... than...? How much more is...?

Is this true or false?

If I know that $17 + 2 = 19$, what else do I know? (e.g. $2 + 17 = 19$; $19 - 17 = 2$; $19 - 2 = 17$; $190 - 20 = 170$ etc).

What do you notice? What patterns can you see?

Progress to crossing the tens boundary

$$47 + 15 \text{ (} 40 + 10 = 50, 7 + 5 = 12 \text{ then } 50 + 12 = 62 \text{)}$$

Adjusting

$$34 + 9 \text{ (adding 10 then subtracting 1)}$$

With Jottings

$$45 + 19 \text{ (by adding 20 and subtracting 1)}$$

Using known facts and place value:

$$63 + 4$$

$$3 + 4 = 7 \text{ so } 63 + 4 = 67$$

Estimating:

Check calculations by adding in a different order

$$\text{check } 27 + 15 \text{ (} 27 + 10 + 5 \text{) with } 15 + 20 + 7$$

Partitioning through use of physical resources

$$47 + 25 = 72$$

Adding two-digit numbers by partitioning each number and recombining

$$25 + 32$$

$$20 + 30 = 50 \text{ (tens)}$$

$$5 + 2 = 7 \text{ (ones)}$$

$$50 + 7 = 57$$

Adding two-digit numbers by partitioning the second number

$$25 + 32$$

$$25 + 30 = 55$$

$$55 + 2 = 57$$

ADDITION: Y3		
Understanding the operation and related vocabulary.	Mental Calculations	Written Calculations
<p><u>Understanding the operation</u> Understand the principles of the commutative and associative law: Recognise that $45 + 36$ is equal to $36 + 45$ Recognise that if calculating $13 + 14 + 9$ the numbers can be combined in any order</p> <p>Understand the inverse relationship between addition and subtraction $45+22=67$ $22+45=67$ $67=45+22$ $67=22+45$ $67-22=45$ $67-45=22$ $22=67-45$ $45=67-22$</p> <p>Solve missing number problems $62+\square=74$ $\square=45+32$ $\square+\square=50$ $100 - 3 = 67 + \square$ $45 < \square + 6$ $\square+\square > 54 + 9$</p> <p><u>Vocabulary</u> Hundreds, tens, ones, estimate, partition, recombine, difference, decrease, near multiple of 10 and 100, inverse, rounding, column subtraction, exchange See also Y1 and Y2</p> <p><u>Generalisations</u> Noticing what happens to the digits when you count in tens and hundreds. Odd + odd = even etc (see Year 2) Inverses and related facts – develop fluency in finding related addition and subtraction facts. Develop the knowledge that the inverse relationship can be used as a checking method.</p> <p><u>Key Questions</u> What do you notice? What patterns can you see? When comparing two methods alongside each other: What's the same? What's different? Look at this number</p>	<p><u>Number facts</u> Continue to recall and use addition facts to 20 fluently, and derive and use related facts beyond 100 7 add 9, 80 plus 70, the sum of 90 and 60, 30 more than 110</p> <p>Know pairs of two-digit numbers with a total of 100 $74 + \square = 100$ $100 = 59 + \square$</p> <p><u>Mental methods and jottings</u> Add numbers mentally, including: * a three-digit number and ones * a three-digit number and tens * a three-digit number and hundreds</p> <p><u>Counting On (Sequencing)</u> $137 + 50$ (by counting on in tens; $147, 157, 167, 177, 187$) With jottings: $345 + 37$ (by partitioning the second number and counting on; $+30, +5, +2$)</p> <p><u>Partitioning:</u> $236 + 33$ ($30+30=60, 6+3=9, 200+60+9=269$) With jottings: $236 + 85$ ($80+30=110, 6+5=11, 200+110+11=321$)</p> <p><u>Adjusting:</u> $234 + 99$ (by adding 100 and subtracting 1) With jottings: $334 + 59$ (by adding 60 and subtracting 1)</p> <p><u>Using known facts and place value:</u> $282 + 7$ $2+7=9$ so $282+7= 289$</p>	<p>For those that need reinforcement, begin with using a number line and partitioning the second number.</p> <p><u>Partitioning</u> Partition both numbers and recombine.</p> <p>Count on by partitioning the first number only: $247 + 125 = 200 + 100 = 300$ $40 + 20 = 60$ $7 + 5 = 12$ $300 + 60 + 12 = 372$</p> <p>Move on to partitioning the second number only: $247 + 125 = 247 + 100 = 347$ $347 + 20 = 367$ $367 + 5 = 372$</p> <p>Children need to be secure adding multiples of 100 and 10 to any three-digit number including those that are not multiples of 10.</p> <p><u>Towards a Written Method</u> Introduce expanded column addition modelled with place value counters or Dienes.</p> $ \begin{array}{r} 247 + 12 \\ 200 \quad 40 \quad 7 \\ \quad 10 \quad 2 \\ \hline 200 \quad 50 \quad 9 \end{array} $

in the formal method; can you see where it is in the expanded method / on the number line?

Manipulatives can be used to support mental imagery and conceptual understanding. Children need to be shown how these images are related eg. What's the same? What's different?

Estimating:

Estimate the answer to a calculation

$139 + 58$ is approximately $150 + 50$

Use inverse operations or equivalent calculations to check answers

$236 + 85$ by adding in a different order e.g. $200 + 85 + 36$

Add numbers with up to three digits, using formal written methods of columnar addition for higher attainers

record using marks that they can interpret and explain	read, write and interpret mathematical statements involving subtraction (-) and equals (=) signs; solve missing number problems	solve missing number problems	solve missing number problems	continue to solve missing number problems	continue to solve missing number problems begin to use brackets	continue to solve missing number problems explore the order of operations using brackets
begin to use the vocabulary involved in subtracting <i>take away, subtract, how many are left, how many more to make, how many more, how many fewer, ...less than ..., leave, how many have gone</i>	understand the vocabulary related to subtraction <i>minus, the difference between, how much more is ... than ..., how much less is .. than ...</i>	understand the vocabulary related to subtraction	understand, read and spell vocabulary related to subtraction correctly <i>decrease</i>	understand, read and spell vocabulary related to subtraction correctly	read, spell and pronounce mathematical vocabulary related to subtraction correctly	read, spell and pronounce mathematical vocabulary related to subtraction correctly
Recalling number facts						
recall subtraction facts to 5	recall and use subtraction facts to 10 fluently	recall and use subtraction facts to 20 fluently, and derive and use related facts up to 100	continue to recall and use subtraction facts to 20 fluently, and derive and use related facts beyond 100	continue to use knowledge of subtraction facts and place value to derive related facts	continue to use knowledge of subtraction facts and place value to derive related facts with numbers to one decimal place	continue to use knowledge of subtraction facts and place value to derive related facts with

						numbers to two decimal places
know number pairs with a total of 10 and derive related subtraction facts	know number pairs with a total of 20 and derive related subtraction facts	know complements to the next multiple of 10 know pairs of multiples of 10 with a total of 100 and derive related subtraction facts	know pairs of two-digit numbers with a total of 100 and derive related subtraction facts	know complements to the next multiple of 100	know complements to 1 recall pairs of three-digit numbers with a total of 1000 and derive related subtraction facts	know complements to the next whole number
Mental methods and mental methods with jottings						
find how many are left when some are taken away subtract two single-digit numbers and count back to find the answer. partition a given number of objects (up to 10) into 2 groups	subtract one-digit and two-digit numbers to 20, including zero represent and use number bonds within 20 partition a given number of objects (up to 20) into 2 groups	subtract numbers using concrete objects, pictorial representations, and mentally, including: * a two-digit number and ones * a two-digit number and tens * two two-digit numbers	subtract numbers mentally, including: * a three-digit number and ones * a three-digit number and tens * a three-digit number and hundreds	continue to practise mental methods of subtraction with increasingly large numbers	subtract numbers mentally with increasingly large numbers subtract tenths, and one-digit whole numbers and tenths	perform mental calculations, including with mixed operations, large numbers and decimals calculate intervals across zero
Formal written layout						
		Subtract numbers with up to two digits, using partitioning and number lines.	subtract numbers with up to three digits, using formal written methods of columnar subtraction	subtract numbers with up to 4 digits using the formal written method of columnar subtraction where appropriate	subtract whole numbers with more than 4 digits, including using formal written methods	practise subtraction for larger numbers, using formal written methods
				subtract decimals to 2 decimal places (in the context of money or measures)	subtract decimals, including a mix of whole numbers and decimals and decimals with different numbers of decimal places	continue to practice subtraction calculations with decimals (up to 3 decimal places)
Estimating and checking						
		Use inverse operations to check answers	estimate the answer to a calculation use inverse operations to check answers use equivalent calculations to check answers	estimate the answer to a calculation use inverse operations to check answers use equivalent calculations to check answers	use rounding to check answers to calculations and determine, in the context of a problem, levels of accuracy continue to use appropriate strategies to check answers	Use estimation to check answers to calculations and determine, in the context of a problem, levels of accuracy. continue to use appropriate strategies to check answers

SUBTRACTION: Y1

Understanding the operation and related vocabulary.	Mental Calculations	Written Calculations
<p>Understanding the operation understand subtraction as: 'taking away' - removing part of a set & reduction 'difference' – comparison & how much more is needed</p>  <p>Read, write and interpret mathematical statements involving subtraction (-) and equals (=) signs ;</p> <p>14-3=11 9=16-7 <i>To begin with, children are given number sums, before moving onto writing their own sums.</i></p> <p>Solve missing number problems e.g.</p> <p>11-□=8 □=13-2 3=□-□</p> <p>Vocabulary Subtraction, subtract, take away, minus, distance between, difference between, more than, minus, less than, equals = same as, most, least, pattern, odd, even, digit,</p> <p>Generalisations</p> <ul style="list-style-type: none"> • True or false? Subtraction makes numbers smaller 	<p>Number facts Recall and use subtraction facts to 10 fluently e.g.</p> <p>6 minus 3 8 subtract 2 4 less than 9</p> <p>Know number pairs with a total of 20 and derive related subtraction facts e.g.</p> <p>20+0, 20-1, 20-2, 20-3 ...</p> <p>Mental methods and jottings Subtract one-digit and two-digit numbers to 20, including zero</p> <p>Represent and use number bonds within 20</p> <p>Partition a given number of objects (up to 20) into 2 groups e.g.</p> <p>Partition 15 into 7 and 8, 9 and 6</p> <p>Counting back 15-3 (by counting back 3 in ones; 14, 13, 12)</p> <p>With jottings 15 – 6 (by counting back in ones or partitioning 6 to bridge the tens boundary; -5, -1) <i>Progress to crossing the tens boundary</i></p> 	<p>No formal written layout. Children will be recording their mathematics using pictorial representations, number lines and mathematical statements.</p>     

- When introduced to the equals sign, children should see it as signifying equality. They should become used to seeing it in different positions.

Children could see the image below and consider, "What can you see here?" e.g.

3 yellow, 1 red, 1 blue. $3 + 1 + 1 = 5$

2 circles, 2 triangles, 1

square. $2 + 2 + 1 = 5$

I see 2 shapes with curved lines and 3 with straight lines. $5 = 2 + 3$

$5 = 3 + 1 + 1 = 2 + 2 + 1 =$

$2 + 3$

Some Key Questions

How many more to make...? How many more is... than...? How much more is...? How many are left/left over? How many have gone? One less, two less, ten less... How many fewer is... than...? How much less is...? What can you see here? Is this true or false?

Counting up

9 – 6 (by counting up from 6 to 9 in ones; 7, 8, 9)

With jottings

19 – 14 (by counting up from 14 to 19 in ones; 15, 16, 17, 18, 19)

Using known facts and place value

$6 - 4 = 2$ so $16 - 4 = 12$

Reinforcement of number facts, bonds, etc to be reinforced through the use of number songs and other 'active' exercises.

Use of concrete and pictorial representation

Use of resources to support children's mental subtraction and to help establish what subtraction physically is/looks like e.g. cubes, straws, counters, money, number squares, jottings/pictures.

SUBTRACTION: Y2		
Understanding the operation and related vocabulary.	Mental Calculations	Written Calculations
<p>Understanding the operation</p> <p>Understand subtraction as:</p> <ul style="list-style-type: none"> - taking away - comparison (finding the difference) - partitioning a set <p>Show that subtraction of one number from another cannot be done in any order</p> <p>Recognise that 5-3 is different from 3-5</p> <p>Recognise the inverse relationship between addition and subtraction</p> <div data-bbox="181 719 327 772" data-label="Figure"> </div> <p>Write the related number sentences</p> <p>5+2=7 2+5=7 7=5+2 7=2+5 7-2=5 7-5=2 2=7-5 5=7-2</p> <div data-bbox="542 772 784 951" data-label="Image"> </div> <p>Solve missing number problems e.g.</p> <p>27-□=17 □=21-4 10=□-□</p> <p>Vocabulary</p> <p>Subtraction, subtract, take away, difference, difference between, minus, Tens, ones, partition, near multiple of 10, tens boundary, less than, one less, two less... ten less... one hundred less, more, one more, two more... ten more... one hundred more</p> <p>Generalisation</p>	<p>Number facts</p> <p>Recall and use subtraction facts to 20 fluently, and derive and use related facts up to 100 e.g.</p> <p>15 subtract 8 4 less than 12 80 minus 30 90 take 50</p> <p>Know complements to the next multiple of 10 e.g.</p> <p>52+□ = 60 52+□ = 80</p> <p>Know pairs of multiples of 10 with a total of 100 and derive related subtraction facts e.g.</p> <p>100-10, 100-20, 100-30 ...</p> <p>Mental methods and jottings</p> <p>Subtract numbers using concrete objects, pictorial representations, and mentally, including:</p> <ul style="list-style-type: none"> * a two-digit number and ones * a two-digit number and tens * two two-digit numbers <p>Counting back</p> <p>57 – 20 (by counting back in tens; 47, 37)</p> <p>With jottings</p> <p>57 – 23 (by partitioning the second number and counting back; -20, -3)</p> <p>Begin by not crossing the tens boundary</p> <p>42 – 17 (by partitioning the second number and counting back; -10, -2, -5)</p> <p>Progress to crossing the tens boundary</p> <p>See image on next page</p>	<p>Children will be recording their mathematics using pictorial representations, number lines and mathematical statements.</p> <div data-bbox="1469 440 1715 619" data-label="Image"> </div> <div data-bbox="1749 440 2024 600" data-label="Figure"> </div> <div data-bbox="1485 660 1686 836" data-label="Figure"> </div> <div data-bbox="1756 660 2024 836" data-label="Figure"> </div> <div data-bbox="1485 855 1709 1031" data-label="Figure"> </div> <div data-bbox="1778 855 2024 1031" data-label="Figure"> </div> <div data-bbox="1462 1023 1709 1201" data-label="Figure"> </div> <div data-bbox="1733 1023 2024 1161" data-label="Figure"> </div> <p>Counting back through partitioning</p> <p>Use of partitioning to subtract 2-digit numbers in portions i.e. taking away tens, and then ones e.g.</p> <p>54 – 23</p> <p>54 – 20 = 34</p>

- Noticing what happens when you count back in tens (the digits in the ones column stay the same)
- Odd – odd = even; odd – even = odd; etc
- show that addition of two numbers can be done in any order (commutative) and subtraction of one number from another cannot
- Recognise and use the inverse relationship between addition and subtraction and use this to check calculations and missing number problems. This understanding could be supported by images such as this.

Some Key Questions

How many more to make...? How many more is... than...?
 How much more is...? How many are left/left over? How many fewer is... than...? How much less is...?
 Is this true or false?
 If I know that $7 + 2 = 9$, what else do I know? (e.g. $2 + 7 = 9$; $9 - 7 = 2$; $9 - 2 = 7$; $90 - 20 = 70$ etc).
 What do you notice? What patterns can you see?

Counting

31 – 28 (by counting up from 28 by bridging the tens boundary; +2, +1)

With jottings

65 – 47 (by counting up from 47 by bridging the tens boundary; +3, +10, +5)

Adjusting

35 – 9 (by subtracting 10 and adding 1)

35 – 19 (by subtracting 20 and adding 1)

Using known facts and Place Value

57 – 4

7 – 4 = 3 so $57 - 4 = 53$

Estimating

check calculations by subtracting in a different way

solve $16 - 9$ by $16 - 10 + 1$

check by counting up from 9 to 16

$$34 - 3 = 31$$

Begins without crossing the 10s boundary

Number Line Subtraction

Using complementary addition to subtract by counting on in ones and tens through the use of a number line, then adding up the “jumps”.

$$35 - 24 = 11$$

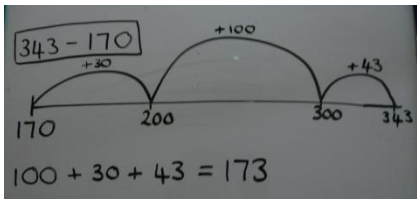

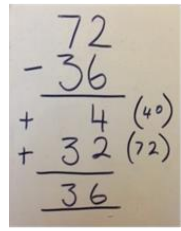

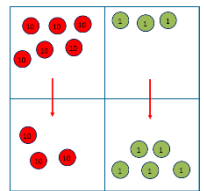

Encourage use of known number bonds to get to multiples of 10, and from there jump in 10s.

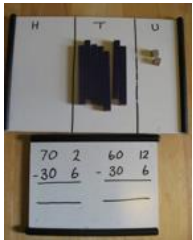

$$42 - 27$$

$$10 + 3 + 2 = 15$$

SUBTRACTION: Y3

What’s different?</p> <p>Can you convince me?</p> <p>How do you know?</p>	<p>Number facts</p> <p>Continue to use knowledge of subtraction facts and place value to derive related facts with numbers to one decimal place (using subtraction vocabulary)</p> <p>1.2 subtract 0.7, 1.8 minus 0.9, the difference between 2 and 1.3, 0.3 fewer than 1.7</p> <p>Know complements to 1</p> <p>0.78 + □ = 1 0.52 + □ = 1</p> <p>Recall pairs of three-digit numbers with a total of 1000 and derive related subtraction facts</p> <p>1000-453, 1000-239, 1000-712 ...</p> <p>Mental methods and jottings</p> <p>Subtract numbers mentally with increasingly large numbers</p> <p>Subtract tenths, and one-digit whole numbers and tenths</p> <p>Counting up:</p> <p>7.2 – 6.8 (by counting up from 6.8 by bridging the units boundary; +0.2, +0.2)</p> <p>With jottings:</p> <p>8.3 – 4.8 (by counting up from 4.8 by bridging the units boundary; +0.2, +3.3)</p> <div></div> <p>Adjusting (with jottings):</p> <p>8.3 – 1.9 (by subtracting 2 and adding 0.1)</p>	<p>Subtract whole numbers with up to 5 digits using formal written methods</p> <p>Subtract decimals, including a mix of whole numbers and decimals and decimals with different numbers of decimal places up to 2 decimal places.</p> <p>Expanded subtraction</p> <p>5642 – 2861</p> <div></div> <p>Decomposition:</p> <p>Some children may still need the support of practical apparatus and models and images, though most children will no longer need to use the expanded method and should be confident using the compact method, having an understanding of the value of each digit. They should be confident using this method for decimals too.</p> <p>25 034 – 7185 36.25 – 14.6</p> <p>(See year 4 for an example)</p>

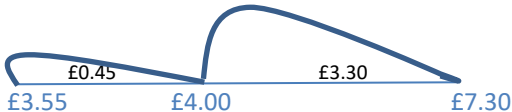

Estimating

Use rounding to check answers to calculations and determine, in the context of a problem, levels of accuracy

25 034 – 7185 is approximately 25 000 – 7000

Use complementary addition to help subtraction if children need additional support with 5 digit numbers. (see Y3 for an example)

Understanding the operation and related vocabulary.	Mental Calculations	Written Calculations
<p><u>Understanding the operation</u> Begin to understand division as both sharing and grouping using concrete objects, pictorial representations and arrays to solve problems.</p> <p>Children should begin to explore finding simple fractions of objects, numbers and quantities.</p> <p><u>Vocabulary</u> Begin to use the vocabulary involved in dividing: share, share equally, one each, two each..., group, groups of, lots of, array, row, column, equal groups of</p> <p><u>Generalisations</u></p> <ul style="list-style-type: none"> • True or false? I can only halve even numbers. • Grouping and sharing are different types of problems. Some problems need solving by grouping and some by sharing. Encourage children to practically work out which they are doing. <p><u>Some Key Questions</u> How many groups of...? How many in each group? Share... equally into... What can do you notice?</p>	<p><u>Number facts</u> Experience regular counting on and back from different numbers in 1s and in multiples of 2, 5 and 10.</p> <p>Count a set of objects by grouping in 2s, 5s or 10s <i>Count these pennies (2 at a time)</i></p> <p>Know corresponding halves of doubles of all numbers to 10: Half of 6 is <input type="text"/> Half of 10 is <input type="text"/></p> <p>Begin to recognise odd and even numbers. <i>Use cubes to make 9 and recognise it is odd (as the cubes cannot be paired)</i></p>  <p>They should begin to recognise the number of groups counted to support understanding of relationship between multiplication and division.</p>  <p> $2 + 2 + 2 + 2 + 2 = 10$ $2 \times 5 = 10$ 2 multiplied by 5 5 pairs 5 hops of 2 </p>	<p>No formal written layout. Children record their maths using pictorial representations, arrays, number lines and mathematical statements.</p> <p>$10 \div 5 = 2$</p>  <p>Use of arrays as a pictorial representation for division. $15 \div 3 = 5$ There are 5 groups of 3. $15 \div 5 = 3$ There are 3 groups of 5.</p>  

Mental methods and jottings

Solve problems involving sharing, grouping and halving; make equal groups

Counting on

There are 10 seeds and some flower pots. Each pot needs 2 seeds in it. How many pots can be planted?

Sharing

Develops importance of one-to-one correspondence.

Grouping

Children should apply their counting skills to develop some understanding of grouping.

How many groups of 2 are in 6?

Jo has 12 Lego wheels. How many cars can she make?

Using doubling and halving

Know corresponding halves of doubles to 10.

Half of 10 is 5.

A ladybird has 12 spots altogether. How many spots on each side of its body?

DIVISION: Y2		
Understanding the operation and related vocabulary.	Mental Calculations	Written Calculations
<p>Understanding the operation Continue to understand division as both sharing and grouping using concrete objects, pictorial representations and arrays to solve problems.</p> <p>Begin to relate division to fractions.</p> <p>Continue to work on arrays and begin to understand the inverse relationship between \times and \div. $15 \div 3 = 5$ There are 5 groups of 3. $5 \times 3 = 15$ $15 \div 5 = 3$ There are 3 groups of 5. $3 \times 5 = 15$</p> <p>Show that division of one number by another cannot be done in any order. $15 \div 5 = 3$ $5 \div 15 \neq 3$</p> <p>Write mathematical statements using the division and equals sign. $6 \div 2 = \square$ $\square = 6 \div 2$ $6 \div \square = 3$ $3 = 6 \div \square$ $\square \div 2 = 3$ $3 = \square \div 2$ $\square \div \nabla = 3$ $3 = \square \div \nabla$</p> <p>Vocabulary Understand and use the vocabulary related to division:</p> <p>Group in pairs, 3s ... 10s etc equal groups of, divide, \div, divided by, divided into, remainder, left over.</p> <p>Generalisations</p>	<p>Number facts Count regularly, on and back, in steps of 2, 3, 5 and 10 from 0. 0 3 6 9 12 15 1830 50 45 40 35 30 0</p> <p>Recall and use division facts for the 2, 5 and 10 times table: <i>How many groups of 10 in 30?</i> <i>Divide 14 by 2.</i> <i>25 divided by 5.</i></p> <p>Recall corresponding halve of doubles of all numbers to 15 and doubles of multiples of 5 to 50. Half of 14 is <input type="checkbox"/> Half of 30 is <input type="checkbox"/></p> <p>Recall and use division facts for the 2, 5 and 10 times table. <i>How many groups of ten in 30 divide 14 by 2 25 divided by 5</i></p> <p>Recognize odd and even numbers. Explain why 15 is an odd number</p> <p>Mental methods and jottings Counting on $70 \div 10 = 7$ (by counting on in tens using fingers to keep track). With jottings: $24 \div 3 = 8$ (counting on in threes using a number line to keep track).</p> 	<p>No formal written layout.</p> <p>Children record their maths using pictorial representations, number lines and mathematical statements.</p> <p><u>Use knowledge of times table facts to recall inverse division</u> $4 \times 10 = 40$ $40 \div 10 = 4$</p> <p><u>Sharing</u> $25 \div 5 = 5 \rightarrow$ share 25 between 5 groups</p>  <p>Apply this to fractions: $3/4$ of 16 = 12 \rightarrow share 16 between 4 groups, count how many are in 3 groups.</p> 

Noticing how counting in multiples of 2, 5 and 10 relates to the number of groups you have counted (introducing times tables)

An understanding of the more you share between, the less each person will get (e.g. would you prefer to share these grapes between 2 people or 3 people? Why?)

Secure understanding of grouping means you count the number of groups you have made. Whereas sharing means you count the number of objects in each group.

Some Key Questions

How many 10s can you subtract from 60?

I think of a number and double it. My answer is 8.

What was my number?

If $12 \times 2 = 24$, what is $24 \div 2$?

Questions in the context of money and measures (e.g. how many 10p coins do I need to have 60p? How many 100ml cups will I need to reach 600ml?)

Sharing

Share 12 pencils **equally** between 6 pots (using objects/pictures)

Grouping

12 pencils shared between 2 pots, how many in each pot?

Using doubling and halving

Know corresponding halves of doubles of all numbers to 15 and doubles of all numbers of multiples of 5 to 50.

$14 \div 2 = 7$ (by recalling the doubles first)

With Jottings

$24 \div 2$ (by halving 20, halving 4 and recombining)

Using known facts and place value

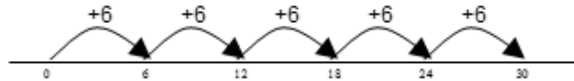

If $4 \div 2 = 2$ then $40 \div 2 = 20$

Fractions

Find a half, a quarter and a third of shapes, objects, numbers and quantities. Finding a fraction of a number of objects to be related to sharing. Explore visually and understand how some fractions are equivalent – e.g. two quarters is the same as one half.

3 apples shared between 4 people = $\frac{3}{4}$

DIVISION: Y3		
Understanding the operation and related vocabulary.	Mental Calculations	Written Calculations
<p>Understanding the operation Understand the operation of division as sharing and grouping.</p> <p>Understand the principles of commutative and associative laws do not apply to division. Recognise that $24 \div 4$ is not equal to $4 \div 24$</p> <p>Understand the inverse relationship between multiplication and division. $6 \times 3 = 18$ $3 \times 6 = 18$ $18 = 3 \times 6$ $18 = 6 \times 3$ $18 \div 3 = 6$ $18 \div 6 = 3$ $6 = 18 \div 3$ $3 = 18 \div 6$</p> <p>Continue using a range of missing number equations as in year 2 but with appropriate numbers. $15 \div \square = 5$ $\square = 14 \div 2$ $20 = \square \times \square$ $5 + 10 = 35 \div \square$ $7 < \square \div 2$ $\square \div \square > 8$</p> <p>Continue to relate fractions to division. $\frac{1}{4}$ of 16 = $16 \div 4$</p> <p>Vocabulary Inverse, in every</p> <p>Generalisations Inverses and related facts – develop fluency in finding related multiplication and division facts. Develop the knowledge that the inverse relationship can be used as a checking method.</p> <p>Some Key Questions Questions in the context of money and measures that involve remainders (e.g. How many lengths of 10cm</p>	<p>Number facts Count regularly, on and back, in steps of 3, 4 and 8. Count from 0 in multiples of 4, 8, 50 and 100. 0 8 16 24 32 500 450 400 350</p> <p>Recall and use division facts for the 3, 4 and 8 times table. How many threes in 27? Divide 24 by 4 48 divided by 8 Divide 80 in to fours</p> <p>Recall corresponding halves and doubles of all numbers to 20, doubles of multiples of 5 to 100 and doubles of multiples of 100 to 500. Half of 16 is \square $18 \div 2 = \square$ Half of 70 is \square</p> <p>Mental methods and jottings Calculate mathematical statements for division using the multiplication tables that they know, beginning to divide two-digit numbers by one-digit numbers (for known multiplication tables).</p> <p>Counting on $70 \div 5$ (by counting on in fives from 50) With jottings: $52 \div 4$ (by counting on in fours from 4×10 using a number line to keep track). With remainders: $54 \div 4$</p> <p>Partitioning</p>	<p>No formal written layout. Begin to divide 2 digit numbers by one digit numbers (for known multiplication tables).</p> <p>Grouping How many 6's are in 30? $30 \div 6$ can be modelled as:</p>  <p>Becoming more efficient using a number line Children need to be able to partition the dividend in different ways. $48 \div 4 = 12$ +40 +8  </p> <p>Remainders $49 \div 4 = 12 \text{ r}1$ +40 +8 r1  </p> <p>Make sensible decisions about rounding up or down after division in the context of a problem. Sharing: 49 shared between 4. How many left over? Grouping: How many 4s make 49. How many are left over?</p>

can I cut from 81cm of string? You have £54. How many £10 teddies can you buy?)

What is the missing number?

$$17 = 5 \times 3 + \underline{\quad}$$

$$\underline{\quad} = 2 \times 8 + 1$$

Without crossing the tens boundary:

$$69 \div 3 = 23$$

$$(60 \div 3 = 20 ; 9 \div 3 = 3)$$

$$20 + 3 = 23$$

Partition number in different ways:

$$52 = 50 + 2; 40 + 12; 30 + 12 \text{ etc}$$

With jottings

Partitioning crossing the tens boundary.

$$65 \div 5 = 13$$

$$(12 \times 5) \quad (1 \times 5)$$

With remainders: $67 \div 5 = 13r2$

Doubling and halving

$$84 \div 2 = 42 \quad (80 \div 2 = 40) \quad (4 \div 2 = 2)$$

With jottings

$$100 \div 4 = 25 \text{ (halve and halve again)}$$

Half of 100 is 50, half of 50 is 25.

Known facts and place value

Use multiplication and division facts they know to make links with other facts.

$$\text{If: } 3 \times 2 = 6, 6 \div 3 = 2, 2 = 6 \div 3$$

$$\text{Then: } 30 \times 2 = 60, 60 \div 3 = 20, 2 = 60 \div 30$$

Estimating

Estimate the answer to a calculation:

$$52 \div 4 \text{ is between 10 fours and 20 fours.}$$

Use inverse operations and equivalent calculations to check answers:

$$\text{Check } 65 \div 5 = 13 \text{ with } 5 \times 13 = 65.$$

Place value counters can be used to support children apply their knowledge of grouping.

$$60 \div 10 = \text{How many groups of 10 in 60?}$$

$$600 \div 100 = \text{How many groups of 100 in 600?}$$

Remainders

Understand the idea of a remainder and make sensible decisions about rounding up or down after division in the context of a problem.

																																																																																																																																																																																																													

True or false? Dividing by 10 is the same as dividing by 2 and then dividing by 5. Can you find any more rules like this?

Is it sometimes, always or never true that $\square \div \Delta = \Delta \div \square$?

Inverses and deriving facts. 'Know one, get lots free!'
e.g.: $2 \times 3 = 6$, so $3 \times 2 = 6$, $6 \div 2 = 3$, $60 \div 20 = 3$, $600 \div 3 = 200$ etc.

Sometimes, always, never true questions about multiples and divisibility. (When looking at the examples on this page, remember that they **may not** be 'always true'!) E.g.:

- Multiples of 5 end in 0 or 5.
- The digital root of a multiple of 3 will be 3, 6 or 9.
- The sum of 4 even numbers is divisible by 4.

$78 \div 6 = 13$ Partition in to multiples of the divisor

$60 \div 6 = 10$; $18 \div 6 = 3$

$10 + 3 = 13$

Using Numicon, dienes or place value counters as support.

With jottings

Partitioning crossing the tens boundary.

$185 \div 5 = 37$ ($150 \div 5 = 30$; $35 \div 5 = 7$)

$30 + 7 = 37$

With remainders: $187 \div 5$

Continue to partition number in different ways:

$762 = 700 + 60 + 2$; $600 + 120 + 42$

Doubling and halving

$600 \div 4$ (halve & halve again)

Half of 600 is 300, half of 300 is 150

With jottings

$112 \div 8$ (halve, halve and halve again)

Half of 112 = 56, half of 56 = 28, half of 28 = 14

Factors

$500 \div 20$ (Divide 500 by 10 then divide by 2)

With jottings

$90 \div 6$ (Divide 90 by 3 then divide by 2)

Estimating

Estimate the answer to a calculation:

$138 \div 3$ is between 40 threes and 50 threes.

Use inverse operations and equivalent calculations to check answers:

Check $98 \div 7 = 14$ with $7 \times 14 = 98$

Short division can also be modelled for understanding using place value counters as shown below. Calculations with 2 and 3-digit dividends. E.g.

$336 \div 3$

$$\begin{array}{r} 112 \\ 3 \overline{) 336} \end{array}$$

$$\begin{array}{r} 112 \\ 6 \overline{) 716} \end{array}$$

Remainders

Continue to make sensible decisions about rounding up or down after division in the context of a problem.

DIVISION: Y5		
Understanding the operation and related vocabulary.	Mental Calculations	Written Calculations
<p>Understanding the operation</p> <p>Continue to understand the distributive law and recognise that $65 \div 5$ is the same as $(50 \div 5) + (15 \div 5)$</p> <p>Continue to relate fractions and division.</p> <p>Understand:</p> <ul style="list-style-type: none"> - Scaling by simple fractions - Simple rates - Begin to understand links to ratio problems. - <p>Continue using a range of equations as in year 4 but with appropriate numbers. $\square = 540 \div 6$ $\square = 3.2 \div 8$ $48 = \square \div \square$ $90 \div 30 = 6 \times \square$ $\square \times \square > 600 \div 8$</p> <p>Continue to solve missing number problems $\square = 540 \div 6$ $\square = 3.2 \div 8$ $48 = \square \div \square$ $90 \div 30 = 6 \times \square$ $\square \times \square > 600 \div 8$</p> <p>Begin to use brackets. $(60+3) \div 7 = \square$ $\square = 10 + (1.4 \div 2)$</p> <p>Vocabulary common factors prime number, prime factors composite numbers short division square number cube number inverse power of</p> <p>Generalisations</p>	<p>Number facts</p> <p>Count regularly using a range of multiples, and powers of 10, 100 and 1000, building fluency.</p> <p>Practice and apply the multiplication facts to 12×12. Use knowledge of counting in multiples to counting in decimal steps (one decimal place). $0.6 \quad 1.2 \quad 1.8 \quad 2.4 \quad \dots$</p> <p>Derive corresponding halves of doubles of decimals (to 1 place) using knowledge of place value. Half of $0.4 = 0.2$ $3.6 \div 2 = 1.8$</p> <p>Continue to recall division facts for multiplication tables to 12×12 fluently and derive and use related facts: 560 divided by 7 divide 2.1 by 7 $4500 \div 5$, what is the quotient? 3.2 divided by 4</p> <p>Identify multiples and factors and common factors of two numbers and primes. list the multiples of 9 between 150 and 180 (using tests of divisibility)</p> <p>Mental methods and jottings</p> <p>Divide mentally drawing upon known number facts. Use factors to construct equivalence statements. Begin to divide tenths and 1-digit whole numbers and tenths by 1-digit whole numbers.</p> <p>Partitioning</p> <p>Using distributive law: $546 \div 6$ ($540 \div 6 = 90$; $6 \div 6 = 1$ so $90 + 1 = 91$) With jottings</p>	<p>Divide numbers up to 4 -digits by a 1-digit number using a formal written method (short division) and interpret remainders appropriately for the context e.g. $3075 \div 5$; $6831 \div 9$</p> $\begin{array}{r} 0 \ 6 \ 1 \ 1 \ r \ 2 \\ 5 \overline{) 3 \ 0 \ 5 \ 7} \end{array}$ <p>Remainders</p> <p>Interpret non-integer answers to division by expressing results in different ways according to the context, including with remainders, as fractions, as decimals or by rounding.</p> <p>(See NCETM video – Division with exchange)</p>

The = sign means equality. Take it in turn to change one side of this equation, using multiplication and division, e.g.

Start: $24 = 24$

Player 1: $4 \times 6 = 24$

Player 2: $4 \times 6 = 12 \times 2$

Player 1: $48 \div 2 = 12 \times 2$

Sometimes, always, never true questions about multiples and divisibility. E.g.:

- If the last two digits of a number are divisible by 4, the number will be divisible by 4.
- If the digital root of a number is 9, the number will be divisible by 9.
- When you square an even number the result will be divisible by 4 (one example of 'proof' shown left)

$24.5 \div 7$ ($21 \div 7 = 3$; $3.5 \div 7 = 0.5$ so $3 + 0.5 = 3.5$)

Continue to partition number in different ways:

$762 = 700 + 60 + 2$; $600 + 120 + 42$

Doubling and halving

$14.8 \div 4$ (halve and halve again)

Half of $14.8 = 7.4$; half of $7.4 = 3.7$

With jottings:

$3800 \div 50$ (divide by 100 then double)

$3800 \div 100 = 38$; double $38 = 76$.

Factors

$84 \div 20$ (halve and divide by 10)

$84 \div 2 = 42$ $42 \div 10 = 4.2$

With jottings

$150 \div 6$ ($150 \div 3 = 50$, then $50 \div 2 = 25$).

Using known facts and place value

$8.4 \div 7$ (multiply dividend by 10, then divide quotient by 10)

$84 \div 7 = 12$, $12 \div 10 = 1.2$

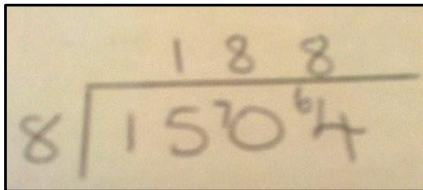

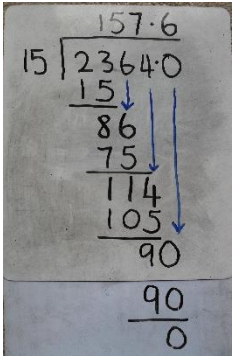

Estimating

Use rounding to check answers to calculation and determine, in the context of a problem, levels of accuracy:

$256 \div 12$ is approximately $2560 \div 10$.

Continue to use appropriate strategies to check answers:

Check $860 \div 9$ by using the inverse.

MULTIPLICATION: Y1

Understanding the operation and related vocabulary

Understanding the operation

Begin to understand multiplication by using concrete objects, pictorial representations and arrays to solve problems; make connections between the different representations.

begin to use the vocabulary involved in multiplying

Vocabulary

ones, groups, lots of, doubling
repeated addition array, row, column,
groups of, lots of, times, columns, rows
longer, bigger, higher etc
times as (big, long, wide ...etc)

Generalisations

Understand 6 counters can be arranged as 3+3 or 2+2+2

Understand that when counting in twos, the numbers are always even.

Some Key Questions

Why is an even number an even number?

What do you notice?

What's the same? What's different?

Can you convince me?

How do you know?

Mental Calculations

Number facts

Count in multiples of twos, fives and tens

0 2 4 6 8 10...

How many legs have 5 teddies got altogether?

How much money have I got in my purse? 5,10,15,20

How many 10ps do I need to buy a chocolate bar for 30p?

Know doubles of all numbers to 10

Double 3 is

8+8=

Double 5 is

6+6=

2 groups of 5
How many altogether?
5+5
Double 5

double 4 is 8
 $4 \times 2 = 8$

Written Calculations

No formal written layout.

Children will be recording their mathematics using pictorial representations, arrays, number lines and mathematical statements.

Begin to recognise odd and even numbers

Use cubes to make 9 and recognise it is odd (as the cubes cannot be paired)

Sort Numicon into odd and even numbers

What happens if we put two odd numbers together?

Mental Methods and jottings

Counting

Count a set of objects by grouping in 2s, 5s or 10s

Count these marbles (2 at a time)

Solve problems involving doubling and equal groups

I need 5 eggs to bake a cake. How many eggs will I need to bake 2 cakes?

Counting on

There are 3 pots. Each pot has 2 seeds in. How many seeds are planted?

(by counting on in twos using objects or pictures to keep track)

Doubling and halving

A ladybird has 6 spots on each wing. How many spots are there altogether?

(by recognising $6+6=12$)

MULTIPLICATION: Y2

Understanding the operation and related vocabulary

Understanding the operation

Understand multiplication as

- repeated addition
- describing an array
- scaling (to compare 2 items) e.g. twice as long
- correspondence problems – one to many

$5+5+5+5+5=30$
 $5 \times 6 = 30$
 5 multiplied by 6
 6 groups of 5

3 groups of 10 pencils
 $10+10+10=30$
 $10 \times 3 = 30$

Show that multiplication of two numbers can be done in any order

recognise that 5×3 is equal to 3×5

Mental Calculations

Number facts

Count in steps of 2, 3, 5 and 10 from 0

0 3 6 9 12 15 1830
 50 45 40 35 30 0

Recall doubles of all numbers to 15 and doubles of multiples of 5 to 50

Double 13 is $11+11=\square$

Double 25 is $45+45=\square$

Recall and use multiplication facts for the 2, 5 and 10 multiplication tables

3 groups of 10 multiply 7 by 2 5 multiplied by 4

Recognise odd and even numbers

Explain why 27 is an odd number

Mental Methods and Jottings

Written Calculations

No formal written layout.

Children will be recording their mathematics using pictorial representations, arrays, number lines and mathematical statements.

5 groups of 3=15
 3 groups of 5=15
 $3+3+3+3+3=15$
 $5+5+5=15$
 $3 \times 5=15$
 $5 \times 3=15$

2 groups of 4=8
 4 groups of 2=8
 $4 \times 2=8$
 $2 \times 4=8$

Recognise the inverse relationship between multiplication and division

Write the related number sentences

$5 \times 2=10$ $2 \times 5=10$ $10=5 \times 2$ $10=2 \times 5$
 $10 \div 2=5$ $10 \div 5=2$ $2=10 \div 5$ $5=10 \div 2$

Write mathematical statements using the multiplication (\times), and equals (=) signs

$5 \times 4=20$ $16=8 \times 2$
 $3 \times \square=15$ $\square=2 \times 7$ $20=\square \times \square$

Vocabulary

multiple, multiply, multiplication array, multiplication tables / facts, groups of, lots of, times, columns, rows, once, twice, three, ten times as big, repeated addition,

Generalisation

Counting on/repeated addition

7×5 (by counting on in fives using fingers to keep track)

With jottings 3×5 (by counting on in threes using a number line to keep track)

Doubling and halving

7×2 (by recalling the doubles fact)

With partitioning

12×2 (by doubling 10, doubling 2 and recombining)

Estimating and Checking

Begin to use equivalent calculations to check answers

<p>Repeated addition can be shown mentally on a number line</p> <p>Inverse relationship between multiplication and division. Use an array to explore how numbers can be organised into groups.</p> <p><u>Some Key Questions</u></p> <p>What do you notice?</p> <p>What's the same? What's different?</p> <p>Can you convince me?</p> <p>How do you know?</p>		
---	--	--

MULTIPLICATION: Y3

Understanding the operation and related vocabulary

Understanding the operation as

- repeated addition
- an array
- scaling – comparison and enlargement
- correspondence problems – one to many and many-to-many

$$9+9+9+9=36$$

$$4+4+4+4+4+4+4+4+4=36$$

$$9 \times 4 = 36$$

Understand commutativity and associativity
recognise that 7×4 is equal to 4×7

recognise that if calculating $2 \times 3 \times 10$ the numbers can be combined in any order

Understand the inverse relationship between multiplication and division

$$6 \times 3 = 18 \quad 3 \times 6 = 18 \quad 18 = 6 \times 3 \quad 18 = 3 \times 6$$

$$18 \div 3 = 6 \quad 18 \div 6 = 3 \quad 3 = 18 \div 6 \quad 6 = 18 \div 3$$

Mental Calculations

Number facts

Count from 0 in multiples of 4, 8, 50 and 100

0 8 16 24 32

500 450 400 350

50, 100, 150, 200, 250

Recall doubles of all numbers to 20, doubles of multiples of 5 to 100 and doubles of multiples of 100 to 500

Double 17 is $19 \times 2 =$

Double 65 is $85 \times 2 =$

Double 300 is $400 + 400 =$

Recall and use multiplication facts for the 2, 3, 4, 5, 8 and $10 \times$ multiplication tables and begin to use knowledge of place value to derive related facts using correct vocabulary

3 groups of 8 multiply 9 by 4
the product of 8 and 4 50 multiplied by 4

Th	H	T	U
		5	3
5	3	0	0

Place value cards

Use digit cards to make numbers in the grid. Show how each digit in a number moves one column to the left when a number is multiplied by 10 and two columns to the left when a number is multiplied by 100.

Mental Methods and Jottings

Counting on

5×14 (by counting on in fives from 50)

Written Calculations

Begin to use formal written methods for two-digit numbers multiplied by one-digit numbers (for known multiplication facts)

Use models and images to demonstrate grid method

Use manipulatives such as Dienes apparatus and place value counters

38×5

x	30	8
5	150	40

190

***Children to use grid method by the end of year 3**

$$\begin{aligned} 5 \times 6 &= 30 \\ 6 \times 5 &= 30 \\ 30 \div 6 &= 5 \\ 30 \div 5 &= 6 \end{aligned}$$

Solve missing numbers problems involving multiplication

$$\begin{aligned} 3 \times \square &= 15 & \square &= 2 \times 7 & 20 &= \square \times \square \\ 25 + 10 &= 5 \times \square & 15 &< \square \times 2 & \square \times \square > 20 \end{aligned}$$

Vocabulary

partition, grid method, inverse, product

Generalisations

Connecting x2, x4 and x8 through multiplication facts

Comparing times tables with the same times tables which is ten times bigger. If $4 \times 3 = 12$, then we know $4 \times 30 = 120$. Use place value counters to demonstrate this.

When they know multiplication facts up to x12, do they know what x13 is? (i.e. can they use 4×12 to work out 4×13 and 4×14 and beyond?)

Key Questions

What do you notice?
What's the same? What's different?
Can you convince me?
How do you know?

with jottings

4×13 (by counting on in fours from 4×10 using a number line to keep track)

Partitioning (with distributive law)

Without crossing the tens boundary

$$32 \times 3 = (30 \times 3 = 90, 2 \times 3 = 6, 90 + 6 = 96)$$

with jottings

Crossing the tens boundary

$$17 \times 5 = (10 \times 5 = 50, 7 \times 5 = 35, 50 + 35 = 85)$$

Doubling and halving

9×20 (multiply by 10 and then double)

$$9 \times 10 = 90 \quad \text{Double 90 is 180}$$

with jottings

28×4 (double and double again)

Double 28 is 56, double 56 is 112

Using known facts and place value

Use manipulatives to demonstrate this.

$$4 \times 11$$

$$4 \times 10 = 40 \text{ so } 4 \times 11 = 44$$

$$13 \times 3$$

$$\begin{aligned} 13p \times 3 &= 10p \times 3 + 3p \times 3 \\ &= 30p + 9p \\ &= 39p \end{aligned}$$

	<p>30×5 $3 \times 5 = 15$ so $30 \times 5 = 150$</p> <p><u>Estimating and checking</u> Estimate the answer to a calculation 38×5 is approximately 40×4 Use inverse operations and equivalent calculations to check answers. 28×4 by doubling ($28 \times 2 \times 2$) or using partitioning (20×4 and 8×4)</p>	
--	--	--

MULTIPLICATION: Y4

Understanding the operation and related vocabulary

Understanding the operation of multiplication as:

- repeated addition
- describing an array
- scaling – comparison and enlargement
- correspondence problems – one to many and many-to-many

$$11+11+11+11=44$$

$$7+7+7+7+7+7=49$$

Understand the distributive law

recognise that 14×5 is the same as 10×5 added to 4×5

$$36 \times 9 = (30 \times 9) + (6 \times 9) = 270 + 54 = 324$$

continue to understand commutativity and associativity

$$7 \times 9 \text{ is equal to } 9 \times 7$$

$4 \times 8 \times 10$ can be combined in any order:

$$4 \times 8 \times 10 = 320$$

$$8 \times 10 \times 4 = 320$$

$$10 \times 4 \times 8 = 320$$

Continue to understand the inverse relationship between multiplication and division

$$6 \times 7 = 42 \quad 7 \times 6 = 42 \quad 42 = 6 \times 7 \quad 42 = 7 \times 6$$

$$42 \div 7 = 6 \quad 42 \div 6 = 7 \quad 7 = 42 \div 6 \quad 6 = 42 \div 7$$

Solve missing numbers problems involving multiplication

$$3 \times \square = 15 \quad \square = 2 \times 7 \quad 20 = \square \times \square$$

$$25 + 10 = 5 \times \square \quad 15 < \square \times 2 \times \square > 20$$

Vocabulary

Factor

Mental Calculations

Number facts

Count in multiples of 6, 7, 9, 25 and 1000

$$0 \quad 7 \quad 14 \quad 21 \quad 28 \quad \dots$$

$$300 \quad 275 \quad 250 \quad 225 \quad 200 \quad \dots$$

$$25 \quad 50 \quad \square \quad \square \quad \square$$

$$100 \quad \square \quad \square \quad \square \quad \square$$

$$\square \quad 325 \quad \square \quad 375 \quad \square$$

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30

Derive doubles of multiples of 50 to 1000 and multiples of 1000

$$\text{Double } 950 \text{ is } \square \quad 750 \times 2 = \square$$

$$\text{Double } 8000 \text{ is } \square \quad 6000 + 6000 = \square$$

Recall multiplication facts for multiplication tables up to 12×12 , and use place value to derive related facts (using subtraction vocabulary)

$$7 \text{ groups of } 8 \quad \text{multiply } 9 \text{ by } 6$$

$$\text{the product of } 8 \text{ and } 11 \quad 60 \text{ multiplied by } 4$$

Recognise factor pairs

Mental Methods and Jottings

Multiply mentally using place value, known and derived facts, including: multiplying by 0 and 1; multiplying together three numbers and multiplying decimals by 10 and 100.

Counting on

$$3 \times 42 \text{ (by counting on in threes from } 120 \text{)}$$

Written Calculations

Multiply two-digit and three-digit numbers by a two and three digit number using formal written layout

Children to embed and deepen their understanding of the grid method to multiply. Ensure this is still linked back to their understanding of arrays and place value counters.

$$36 \times 4 = 144$$

X	30	6
4	120	24

$$120 + 24 = 144 \text{ (add the partial products)}$$

$$127 \times 6 = 762$$

x	100	20	7
6	600	120	42

$$600 + 120 + 42 = 762 \text{ (add the partial products)}$$

Generalisations

When they know multiplication facts up to $\times 12$, do they know what $\times 13$ is? (i.e. can they use 4×12 to work out 4×13 and 4×14 and beyond?)

Key Questions

What do you notice?

What's the same? What's different?

Can you convince me?

How do you know?

With jottings

7×53 (by counting on in sevens from 7×50 using a number line to keep track)

3×50

$3 \times 53 = 371$

Partitioning (using the distributive law)

53×6 ($50 \times 6 = 300$ $3 \times 6 = 18$ $300 + 18 = 318$)

Using doubling and halving

35×8 (double, double and double again)

Double 35 is 70, double 70 is 140, double 140 is 280

With jottings

73×5 (multiply by 10 and then halve)

$73 \times 10 = 730$ Half of 730 is 365 (Some children may need to partition 730 in a different way)

Using factors

$15 \times 6 = 15 \times 3 \times 2$

$15 \times 3 = 45$ $45 \times 2 = 90$

Using known facts and place value

$24 \times 10 = 240$ so $24 \times 9 = 216$ (by subtracting 24 from 240)

800×6

$8 \times 6 = 48$ so $800 \times 6 = 480$

36×42

x	30	6
40	1200	240
2	60	12

$1200 + 240 + 60 + 12 = 1512$

127×23

X	100	20	7
20	2000	400	140
3	300	60	21

$2000 + 400 + 300 + 140 + 60 + 21 = 2921$

Higher attainers move onto expanded method for multiplication.

36×4

$$\begin{array}{r} 36 \\ \times 4 \\ \hline 24 \quad (4 \times 6) \\ 120 \quad (4 \times 30) \\ \hline 144 \end{array}$$

Linked to money

$\pounds 3.36 \times 2$

$$\begin{array}{r} \pounds 3.36 \\ \times 2 \\ \hline .12 \quad (2 \times .06) \\ .60 \quad (2 \times .30) \\ \hline 6.00 \quad (2 \times 3.00) \\ \pounds 6.72 \end{array}$$

MULTIPLICATION: Y5

Understanding the operation and related vocabulary

Understanding the operation of multiplication as:

- scaling by simple fractions
- simple rates

Continue to understand the distributive, commutative and associative laws

recognise that 37×6 is the same as 30×6 added to 7×6 (distributive)

recognise that 25×7 is equal to 7×25 (commutative)

recognise that if calculating $18 \times 4 \times 10$ the numbers can be combined in any order (associative)

$$a \times b = b \times a$$

$$(a + b) + c = a + (b + c)$$

Continue to understand the inverse relationship between multiplication and division

write the related number sentences

$$6 \times 0.7 = 4.2 \quad 0.7 \times 6 = 4.2 \quad 4.2 = 6 \times 0.7 \quad 4.2 = 0.7 \times 6$$

$$4.2 \div 0.7 = 6 \quad 4.2 \div 6 = 0.7 \quad 0.7 = 4.2 \div 6 \quad 6 = 4.2 \div 0.7$$

Mental Calculations

Number facts

Use knowledge of counting in multiples to count in decimal steps (one decimal place)

0.6 1.2 1.8 2.4 ...

8.4 7.7 7.0 6.3 ...

Derive doubles of decimals (to one decimal place) using knowledge of place value

Double 0.4 is $0.7 \times 2 =$

Double 3.8 is $5.6 + 5.6 =$

Continue to recall multiplication facts for multiplication tables up to 12×12 fluently, and derive and use related facts

7 groups of 8

multiply 12 by 9

the product of 80 and 40

0.6 multiplied by 4

x	1	2	3	4	5	6	7	8	9	10	11	12
1	1	2	3	4	5	6	7	8	9	10	11	12
2	2	4	6	8	10	12	14	16	18	20	22	24
3	3	6	9	12	15	18	21	24	27	30	33	36
4	4	8	12	16	20	24	28	32	36	40	44	48
5	5	10	15	20	25	30	35	40	45	50	55	60
6	6	12	18	24	30	36	42	48	54	60	66	72
7	7	14	21	28	35	42	49	56	63	70	77	84
8	8	16	24	32	40	48	56	64	72	80	88	96
9	9	18	27	36	45	54	63	72	81	90	99	108
10	10	20	30	40	50	60	70	80	90	100	110	120
11	11	22	33	44	55	66	77	88	99	110	121	132
12	12	24	36	48	60	72	84	96	108	120	132	144

Identify multiples and factors, and common factors of two numbers.

list the factors of 96

identify the common factors of 30 and 36 by listing factor pairs

give a number that is a multiple of 3 and a multiple of 2 (and recognise these are multiples of 6)

list the multiples of 9 between 150 and 180 (using tests of divisibility)

Written Calculations

Multiply numbers up to 4 digits by a one- or two-digit number using a formal written method, including long multiplication for two-digit numbers.

Multiply numbers with up to one decimal place by one-digit whole number.

Use grid method, progressing to short and long multiplication for numbers with more digits when understanding is secure.

Grid method

$$46 \times 82$$

$$43.2 \times 7$$

x	30	5
20	600	100
6	180	30

$$600 + 100 = 700$$

$$180 + 30 = 210$$

$$700 + 210 = 910$$

x	6
2.0	12.0
0.3	1.8

$$13.8$$

Short multiplication

$$36 \times 4 = 144$$

$$\begin{array}{r} 30 + 6 \\ \times 4 \\ \hline 24 \\ + 120 \\ \hline 144 \end{array}$$

$$(4 \times 6 = 24)$$

$$(4 \times 30 = 120)$$

Include an addition symbol when adding partial products.

$$\begin{array}{r} 36 \times 4 = 36 \\ \times 4 \\ \hline 144 \\ 2 \end{array}$$

Short multiplication for multiplying by a single digit

x	300	20	7
4	1200	80	28

x	327
4	1308

Pupils could be asked to work out a given calculation using the grid, and then compare it to 'your' column method. What are the similarities and differences? Unpick the steps and show how it reduces the steps.

Continue to solve missing number problems

$$6 \times \square = 540 \quad \square = 0.4 \times 8 \quad 480 = \square \times \square$$

$$90 \times 40 = 6 \times \square \quad 2.5 < \square \times 5 \quad \square \times \square > 700 \times 8$$

begin to use brackets

$$(10+3) \times 7 = \square$$

$$\square = 10 + (0.4 \times 8)$$

Vocabulary

cube numbers

prime numbers

square numbers

common factors

prime number, prime factors

composite numbers

Generalisation

Relating arrays to an understanding of square numbers and making cubes to show cube numbers.

Understanding that the use of scaling by multiples of 10 can be used to convert between units of measure (e.g. metres to kilometres means to times by 1000)

Key Questions

What do you notice?

What's the same? What's different?

Can you convince me?

How do you know?

How do you know this is a prime number?

Establish whether a number up to 100 is prime and recall primes up to 19; find prime factors

explain why 23 is a prime number

list the prime factors of 20 ($20 = 2 \times 10 = 2 \times 2 \times 5$)

$$5 \times 2 \times 2 \times 2$$

Recognise and use square and cube numbers

What is... 8^2 ? 3^3 ?

Mental Methods and Jottings

Multiply numbers mentally drawing upon known facts

Use factors to construct equivalence statements

$$4 \times 35 = 2 \times 2 \times 35$$

$$3 \times 270 = 3 \times 3 \times 9 \times 10 = 9^2 \times 10$$

begin to multiply tenths, and one-digit whole numbers and tenths by one-digit whole numbers

$$0.2 \times 3 = 0.6$$

Partitioning (using the distributive law)

$$1.2 \times 7 \quad (1 \times 7 = 7 \quad 0.2 \times 7 = 1.4 \quad 7 + 1.4 = 8.4)$$

Doubling and halving

3.7×4 (Double and double again)

Double 3.7 is 7.4, double 7.4 is 14.8

Long multiplication – expanded method

$$\begin{array}{r} 31 \\ \times 25 \\ \hline 155 \\ 620 \\ \hline 775 \end{array}$$

Long multiplication

Initially, some children may need to break this down further

$$\begin{array}{r} 31 \\ \times 25 \\ \hline 155 \\ 620 \\ \hline 775 \end{array}$$

	<p><u>Using factors</u> 25x12=25x2x6 25x2=50 50x6=300</p> <p><u>Using Known facts and place value</u> 13x19 13x20=260 so 13x19=247 (subtract 26 from 260)</p> <p><u>Estimating and Checking</u> Check 86x9 by using an equivalent calculation Multiply by 10 and adjust (860-86) or partition (80x9 added to 6x9)</p>

<p><u>Key Questions</u> What do you notice? What's the same? What's different? Can you convince me? How do you know?</p>	<p>0.24x40 (double and double again, then multiply by 10) Double 0.24 is 0.48, double 0.48 is 0.96, 0.96x10=9.6 68x25 (multiply by 100, then halve and halve again) 68x100=6800 Half of 6800 is 3400 Half of 3400 is 1700</p> <p><u>Using factors</u> 1.5x16=1.5x2x8 1.5x2=3 3x8=24 32x24 = 32x3x8 32x3=96 96x8=800-(4x8)=768</p> <p><u>Using known facts and place value</u> 17x98 17x100=1700 so 17x98 is 1666 (subtract 17x2 from 1700)</p> <p><u>Estimating and checking</u> Use estimation to check answers to calculations and determine, in the context of a problem, levels of accuracy. 5872x54 is approximately 6000x50</p> <p>Continue to use appropriate strategies to check answers Check 496x5 by using an equivalent calculation Multiply by 10 and halve or use a known fact and adjust (500x5) -(4x5)</p>
